Subject: Introduction of new length measuring tool in the Canadian market

Please be advised that length measuring tool models Cubetape PRO (picture A) and Cubetape POS (picture B) manufactured by/for Parceltools P/L will be introduced in the Canadian market shortly.

When used with a tape that displays measurement values (numbers) and barcodes, Measurement Canada has determined that they are to be considered as **Linear Static Measures** and are exempt from approval, examination and certification (*Weights and Measures Regulations*, paragraph 4(1)(o)). Consequently, these **Linear Static Measures** can be used in trade just like a regular tape measure would be.

If you have any question on these tools, please contact the distributor or Measurement Canada's Gravimetric program officer.
